

INTRODUCING PELLETS

HOW TO INTRODUCE PELLETS

- **DO NOT** feed to hungry stock.
- Use Kojonup Feeds Starter pellets for **5 - 7 days** as an introduction onto Finisher pellets.
- Ensure there is a **consistent supply of pellets**, especially when on Finisher pellets.
- **Hay and Straw** can be made available for the first week.
- The Starter ration allows animals to **adapt** to a high grain ration **safely**.
- Ideally fill feeders with Finisher pellets whilst there are still some Starter pellets available.
- Provide access to **good quality drinking water** at all times.
- Should pellet supply run out for any reason, Starter pellets must be used again **before re-introduction onto Finisher ration**.

STORAGE INSTRUCTIONS

- Store in a cool, clean and ventilated place.
- If storing in a silo, **DO NOT** seal the silo, as pellets need to breath.
- Protect from insects and vermin.
- When stored under the correct conditions, best before **12 months** from packing date.
